

# RITHIK E

Machine Learning Engineer (Fresher)

+91 7010302329 | rithik.devpro@gmail.com | LinkedIn | GitHub | Portfolio

## EDUCATION

|                                                                                                                                   |                                           |
|-----------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------|
| <b>Bachelor of Engineering in Computer Science and Engineering</b><br><i>Dr. N.G.P. Institute of Technology — CGPA: 7.73/10</i>   | Coimbatore, Tamil Nadu<br>2024 – 2028     |
| <b>Higher Secondary Certificate (HSC)</b><br><i>Bannari Amman Vidya Niketan Matric Higher Secondary School — Percentage : 85%</i> | Sathyamangalam, Tamil Nadu<br>2023 – 2024 |

## TECHNICAL SKILLS

**Programming Languages:** Python, Java, JavaScript

**Frontend:** HTML, CSS, JavaScript, Bootstrap

**Backend:** Django, Django REST Framework (DRF), REST API Development, API Testing

**Databases:** PostgreSQL, SQL

**Machine Learning:** Scikit-Learn, Pandas, NumPy, EDA, Feature Engineering, Matplotlib, Seaborn

**Generative AI:** RAG, Langchain, AI Automation

**Tools:** Git, GitHub, VS Code, n8n

## PROJECTS

**Customer Churn Prediction System** | *Python, Scikit-Learn, XGBoost, Streamlit, Pandas, NumPy* | [GitHub](#)

- Developed a production-ready machine learning pipeline for customer churn prediction with secure user authentication and dataset management and model versioning.
- Implemented end-to-end workflows including exploratory data analysis, preprocessing, feature engineering and model evaluation.
- Trained and compared multiple machine learning models including Logistic Regression, Random Forest, XGBoost, SVM and KNN.
- Built an interactive Streamlit dashboard for data visualization, model monitoring, and single/batch customer churn predictions.

**CareMate Assistant** | *Python, Django, PostgreSQL, AI* | [GitHub](#)

- Developed an AI-powered wellness assistant with voice interaction and personalized wellbeing recommendations.
- Built scalable backend services using Django, PostgreSQL, REST APIs, and WebSockets to support real-time user interactions and activity tracking.
- Implemented AI-driven features including conversational assistance, emotion analysis, multilingual support, and intelligent appointment booking workflows.
- Designed wellness and healthcare modules including mood analytics, gratitude journaling, yoga recommendations, and doctor appointment management.

## CERTIFICATIONS

- Generative AI Engineering: Foundations, RAG & Deployment** [Credential](#)
- Full Stack Development with Python and Django (PineSphere)**
- Front End Web Development** [Credential](#)

## ACHIEVEMENTS

- First Prize Winner – Paper Presentation, PSG College of Technology (2026)**  
Received a cash prize of Rs.5,000 for presenting a Deep Learning-based Fire Detection Model with Multi-Layer Validation, designed to improve real-time fire detection accuracy and reliability.
